

Online Resources for Integrating Gender into Energy Operations

Step 1: Gender Assessment Resources | Data Collection

Available on www.ESMAP.org

IDENTIFYING POTENTIAL IMPACT OF INTERVENTION BY GENDER¹

This tool helps Project Managers to identify potential benefits and disadvantages of a particular project intervention disaggregated by gender. It allows adjustments that need to be made to minimise any negative effects by the introduction of a new energy technology.

Approach

Desk study. Focus group interviews (optional).

Sources of information

PCN/PAD

Method

Following the identification of gender goals for the project using Tool (3), a desk assessment is made of the how a particular intervention will meet identified goals. The information is summarised in a matrix. This may be adjusted to match the project conditions.

The assessment can be taken a stage further by holding focus group interviews to determine how women and men perceive the intervention. This step provides for a more holistic understanding of the way in which the intended beneficiaries and other community members perceive the intervention.

Proposed Energy Intervention: *(Please write here)*:
